

## Spray Dried Inedible Eggs

Spray-Dried Inedible Eggs are produced from whole eggs that do not meet the USDA's requirements for human consumption. The eggs are pasteurized, spray-dried and then denatured with a slight amount of caramel coloring, giving the finished product a light brown color. The product's metabolizable energy value was determined to be 4700 kcal/kg (as fed basis) for pigs and chickens. Spray dried eggs has 37% more energy than does corn. Eggs are considered an excellent source of immune globulins and typically reported to contain about 150 mg of gamma globulin per egg. Spray-Dried Inedible Eggs is an excellent source of highly digestible amino acids and metabolizable energy for infantile pigs and poultry.

### Guaranteed Analysis

Protein	45.0% Min.
Fat	26.0% Min.
Ash	6.0% Max.
Moisture	6.0% Max.
Particle Size	100% through #16 U.S. Screen
Color	Light Brown

### Typical Analysis

*Nutrient, based on 94% DM Value*

Crude Protein	45%
Crude Fat	26%
Ash	6%
SPC	<100,000 CFU/g
Salmonella	Negative at Origin
Coliforms	<100 CFU/g
Yeast and Mold	<100 CFU/g

### Packaging

Packed in 50 lb bags, stacked on pallets and loaded in 20'/40' containers (at seller's option). Once at destination, this product should be stored in a cool, dry place.
